The approval of the thesis by the Department of Commerce, Finance and Shipping does not imply necessarily the approval by the Department of the views of the writer. <u>Acknowledgements</u>: Firstly, I would like to thank my thesis advisor Dr. Christodoulos Louca of the Department of Commerce, Finance and Shipping at the Cyprus University of Technology. The door to Dr Louca's office was always open whenever I had a question about my research or writing. He consistently allowed this paper to be my own work but steered me in the right direction whenever he thought I needed it. He was always supportive in many ways. Finally, I must express my gratitude to my parents and family for providing me with emotional and financial support and continuous encouragement throughout my period of study and through the process of researching and writing this thesis. This accomplishment would not have been possible without them. Thank you.

ABSTRACT

This study investigates the stock price crashes in various shipping companies, considering the impact of some biographic characteristics of the company's CEO on these crashes. Besides the CEO characteristics, this study also investigates the impact of using hedging activities, on stock price crashes. In addition, it examines whether the number of fleet in a company can impact either stock crashes or hedging activities. The biographic characteristics under study are CEOs age, experience in the specific field of shipping and maritime services, the years as a CEO in the firm and the CEO's education in shipping studies. The general purpose of this research is to study whether the choice of admission of CEO can prevent future possible crashes, and whether it mitigates the risk of stock price failure by making the correct decisions in management positioning and management strategies. This research did not find any significant relation between CEO characteristics to stock price crashes.

Keywords: crash, CEO, shipping companies, CEO characteristics, hedging activities
